DETAILED ACTION

After further consideration and search, the limitation with regards to one or more phase shifter being associated with the microstrip transmission line was found not be allowable as previously stated in the office action dated 12/13/04. A new rejection is disclosed below.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 23-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Quine
US Patent 4,29178

Quine discloses in figures 1 and 2, an microwave power combiner comprising of a dielectric (quartz) substrate (19), six microstrip transmission lines (22 22') formed on the substrate (19), a plurality of phase compensator (14) are connected to the microstrip transmission lines (22 22') and a waveguide 20 positioned such that the signals can transition from the microstrip transmission lines to waveguide 18. Quine discloses a short, line 27, which is positioned opposite waveguide opening 18. Quine states in column 3, lines 67-68 that undesired higher order combiner modes are absorbed. Therefore, no additional losses are added to the system. The microstrip transmission lines are connected to ground through resistors 29. (Figure 3) See column 2; line 38 through column 4; lines 27.

Allowable Subject Matter

Claims 28, 29, and 31-36 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: With regards to claims 28, 29 and 31-36 the prior art of record does not disclose a back short cavity formed within the metallic plate at the transition to the waveguide back short.
